2.1 From source 5

3 Usage **7**

4 Contributors **9**

This package provides a dict-like object that allows keys to be accessed via member variables. Both nested dictionaries as well as lists are supported.

Example:

```
>>> from dict_obj import obj
>>>
>>> d = obj({'a': 1, 'b': {'c': 1}})
>>> d.b.c
1
>>> d['b'].c
1
```

Please see ReadTheDocs for the latest documentation.

CHAPTER 1

Introduction

Warning: Under construction.

CHAPTER 2

Installation

The software is distributed via PyPI, it can be installed with `pip`:

```
pip install dict-obj
```

2.1 From source

The source is hosted on GitHub, to install the latest development version, use the following commands.

```
git clone https://github.com/jfjlaros/dict-obj.git
